Project Design Phase
Proposed Solution Template

Date	29 September 2026
Team ID	SWTID-2026-4940
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Ordering a standard laptop is currently a manual process handled through emails and forms. Approvals and follow-ups are done by hand, which causes delays, errors, and no clear visibility of the request status for employees and the IT procurement team.
2.	Idea / Solution description	Automate the standard laptop order process using ServiceNow Flow Designer. The employee submits a request through a catalog item, the flow sends it to the manager for approval, automatically creates the procurement and delivery tasks, and keeps the requester updated with notifications until the laptop is delivered.
3.	Novelty / Uniqueness	A low-code solution built with Flow Designer, so no complex coding is needed. It uses predefined standard laptop configurations, automatic approval routing, and end-to-end automation with real-time notifications. The flow is easy to update whenever business rules change.
4.	Social Impact / Customer Satisfaction	Employees receive their laptops faster, with fewer mistakes and clear status updates at every step. It reduces waiting time and paper or email usage, improves employee productivity, and frees the IT team to focus on more important work.
5.	Business Model (Revenue Model)	An internal cost-saving model that reduces manual effort and procurement processing cost. It can also be offered as a service to other departments or client organizations using ServiceNow, through a one-time implementation fee or a subscription.
6.	Scalability of the Solution	The same flow can be reused for other standard requests such as monitors, mobile phones, and software licenses. It can be extended to more departments and locations, handle a higher volume of requests, and be integrated with vendor or ERP systems.
